ANNUAL FIRE REPORT
for the
NATIONAL FORESTS

Calendar Year 1965

U.S. DEPARTMENT OF AGRICULTURE - Forest Service

THE ANNUAL FIRE REPORT FOR THE NATIONAL FORESTS IS A COMPILATION OF FOREST FIRE STATISTICS FOR FIRES OCCURRING ON NATIONAL FOREST LAND AND OTHER LANDS PROTECTED BY THE FOREST SERVICE.

CONTENTS

Table 1. NUMBER OF FIRES BY GENERAL CAUSES
- National Forest land
- Total All Land
- Other Than National Forest Land

Table 2. AREA BURNED BY GENERAL CAUSES
- National Forest Land
- Total N.F. and Other Land Inside Protection Boundaries

Table 3. AREA BURNED AND DAMAGE
- National Forest Land
- Other Land Inside Protection Boundaries
- Total N.F. and Other Land Inside Protection Boundaries

Table 4. DAMAGE BY MAJOR CAUSES

Table 5. NUMBER OF FIRES BY MAJOR CAUSES AND SIZE CLASSES

Plum Fire - Nebraska National Forest
May 5, 1965

THE 1965 FOREST FIRE REPORT

The lowest burned area in the history of the Forest Service was recorded in 1965 - 75,150 acres. The previous low was in 1962 when 85,457 acres burned. Normal or below normal weather conditions in many places were helpful in attaining this record although several units had periods when fire danger was extreme. Large fires occurred in late June in Arizona and New Mexico due to dry lightning storms accompanied by strong winds. The critical period of fire weather in mid-September in southern Oregon and northern California produced only a few fires and low burned areas on the National Forests. Fire weather was above normal in Oregon and Washington west of the Cascades. The record low burn area compares well with the five-year average of 208,974 acres. Fast, aggressive action on all fires made this record possible.

Fire Occurrence Down

The number of fires as well as burned area was down for 1965. There were 9,365 fires reported for 1965 compared with 9,749 in 1964 and a five-year average of 12,393. Lightning fires were 5,243 in 1965, which is above the 1964 figure of 4,617 but well below the five-year average of 7,125. Man-caused fires dropped significantly again in 1965 to 4,122. This is well below the 1964 figure and five-year average of 5,132 and 5,268 respectively. The fine man-caused fire record reflects much hard work by many Forest Service people and care by the using public. It puts the 1970 goal of 3,500 man-caused fires within reach.

The following tabulation shows total fires by major causes and area burned for all National Forests and Grasslands:

Calendar Year	Number of Fires			Acres Burned
	Lightning	Man-Caused	Total	
1960	7,659	5,164	12,823	424,295
1961	10,576	4,583	15,159	224,394
1962	6,301	5,193	11,494	83,457
1963	6,471	6,269	12,740	127,571
1964	4,617	5,132	9,749	183,154
Average 1960-64	7,125	5,268	12,393	208,974
1965	5,243	4,122	9,365	75,150

Major Fires

Class E fires, those larger than 300 acres, were few in number in 1965. Thirty-six were reported which is a modern day low and compares favorably with 61 such fires in 1964 and a five-year average of 83. One of the largest fires on the National Forests in 1965 was the Plum Fire on the Nebraska National Forest. It started from lightning on May 5 and burned almost 20,000 acres before it was controlled the next day. Burned area included 11,000 acres of tree plantations. The area had no forests until Dr. Charles E. Bessey, a University of Nebraska botanist, encouraged plantings begun about 1902. The area burned is part of the largest man-made forest in the United States.

Forest Fire Fatalities

Fire control activities took the lives of seven men in 1965. A contract pilot and a Forest Service smokejumper spotter were killed when their Twin Beech airplane crashed while they were dropping cargo to smokejumpers on the Boise National Forest. Another contract pilot and a Forest Service observer were killed when their plane crashed on the Ochoco National Forest during a lightning fire reconnaissance flight. Three firefighters died - one from complications following injuries in a helicopter crash on the Snoqualmie National Forest - one from a rolling rock on the Coronado National Forest - one from heart failure on a small lightning fire on the Eldorado National Forest.

Air Attack

Aircraft of all types flew 31,155 hours on fire control missions in 1965. Of this flight time, 5,992 hours were logged by helicopters and 25,163 hours by fixed wing aircraft. Fire control mission flight hours have average 42,821 hours annually from 1960-64.

This year air tankers dropped 1,954,865 gallons of retardant on 991 forest fires. An average of 5,177,243 gallons has been dropped on 1,508 fires each year from 1960 to 1964. The few fires and smaller size did not require the air attack of other years.
